

Care and Cleaning

Our flooring is virtually maintenance free; designed to look great with minimal care. Routine cleaning requires only dust-or-damp-mopping or vacuuming, although vacuum beater bars should be avoided. Mohawk's Floorcare Essentials™ Hard Surface Cleaner or plain tap water are best for damp-mopping; no waxes, polishes, varnish coatings, detergents, abrasive cleaners or “mop-and-shine” products should ever be used. For stubborn stains, carefully use a little acetone (nail polish remover) or other solvents containing alcohol. Even though we make our laminates moisture-resistant, cloths or mops should be wrung out well so liquid doesn't saturate the floor. Some additional tips to preserve your floor's gorgeous appearance: put felt or plastic caps on the feet and legs of your furniture and chairs; rolling chairs and wheelchairs should have soft rollers suitable for laminate flooring. Doormats are a great investment, as are sturdy drip trays for your house plants. When moving large appliances such as refrigerators, use some thick pads or rags. Lots of help and extra caution are good to have on hand.

Installation

We enthusiastically support do-it-yourselfers; however, successful installation of Mohawk laminate depends upon the careful planning and execution of all stages of the installation process. Estimating the materials needed, inspecting the site (both inside and out), evaluating the sub-floor, selecting the correct underlayment, and utilizing the proper tools are some necessary steps you should take before actually installing your new flooring. If you are experienced in home construction or repair and would like to do the installation yourself, please refer to our website (www.mohawkflooring.com) for detailed instructions. Or have your floor professionally installed—just sit back and watch the elegance unfold.

UNICLIC 
PATENTED TECHNOLOGY

Mohawk laminate floors combine beautiful styling, textures and colors with UniClic® technology, the patented premier glueless locking system. Designed to simplify installation, our boards slip quickly into place—at an angle—or slide easily together with a snap guaranteeing easy installation in any situation. No glue is necessary. And with UniClic construction on all four sides of a panel, there is always secure locking action, even when space gets tight.
